                                                                                                                                                                                                                                                                                                                   Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods CC of activating thrombopoietin receptors in cells comprise contacting the CC ells with effective amounts of peptides and peptide mimetics attached to the cells with effective amounts of peptides and peptide mimetics attached to CC as that due to chemotherapy, radiation therapy or bone-marrow CC transplantation and to prevent thrombocytopenia in patients at risk. The Sequences are used to treat and prevent haematological disorders CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC as unique tools for understanding the biological role of thrombopietin CC (TPO) and to develop other compounds that bind to and activate the TPO CC eceptor. The peptides can be used to detect TPO receptors on living CC cells and fixed cells, in biological fluids, in tissue homogenates, and CC in purified or natural biological materials. They may also be used for in Situ staining, Fluorescence-activated cell sorting, Western blotting and CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed committed progenitors alone or in conjunction with additional cytokines

Na+/K+-exchanging ATPase (EC 3.6.3.9) alpha-2 chain - human
N,Alternate names: Na+/K+-exchanging ATPase alpha chain-4; sodium/potassium transporting
C;Species: Homo sapiens (man)
C;Date: 15-Jun-1990 #sequence_revision 15-Jun-1990 #text_change 09-Jul-2004
C;Accession: A34474; B27795; D27397

Mol. Biol. 327:47-59(2003).

FUNCTION: Required for respiration and the maint micochondrial compartment. May have a role in th synthesis of fatty acids.

CATALYTIC ACTIVITY: Acyl-(acyl-carrier protein) + NADPH.
                                                                                                                                                                     2,3-dehydroacyl-[acyl-carrier protein] + NAD SUBUNIT: Homodimer and heterodimer with etr2

3D-structure; Direct protein sequencing; Fatty acid biosynthesis;
Mitochondrion; NADP; Oxidoreductase; Transit peptide.

    FUNCTION: Required for respiration and the maintenance of the mitochondrial compartment. May have a role in the mitochondrial synthesis of fatty acids.
    CATALYTIC ACTIVITY: Acyl-[acyl-carrier protein] + NADP(+) = trans 2,3-dehydroacyl-[acyl-carrier protein] + NADPH.
    SUBURIT: Homodimer and heterodimer with ETR1.
    SUBURITIAUTAR LOCATION: Mitochondrion (By similarity).
    SIMILARITY: Belongs to the zinc-containing alcohol dehydrogenase family. Quinone oxidoreductase subfamily.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EMBL; U94997; AAL55472.1; -.
